

Shiran Israel.

UX | UI DESIGNER

NICE TO MEET YOU

After a productive decade in the fields of interior design and architecture, I decided to focus on a different area of design.

I discovered the fascinating field of UX | UI design that combines three of my favorites: **Design, People, and Technology.**

My education in UX has led me to the conclusion that there are similar and parallel lines between the fields I chose to study, both in user-oriented thinking and design abilities. Therefore I believe that my experience in interior design and architecture has its advantages.

I wish to create a design that fits the product's goals and it's visual experience.
